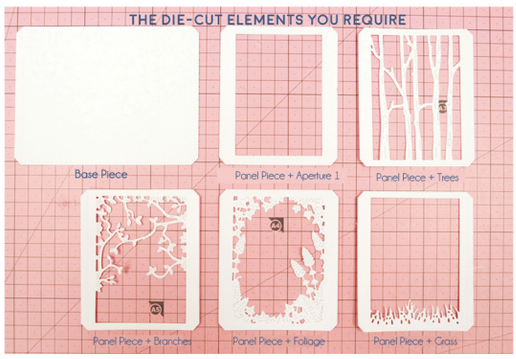
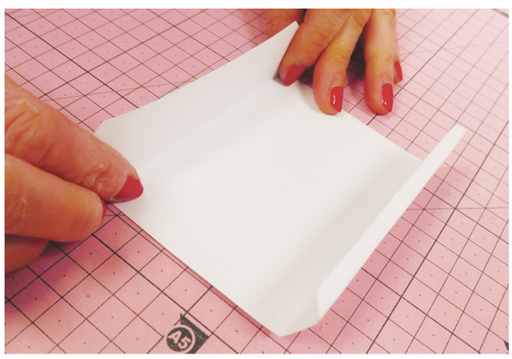
# How to use your Woodland Shadow Box

**To make a Woodland Shadow Box you will need:**

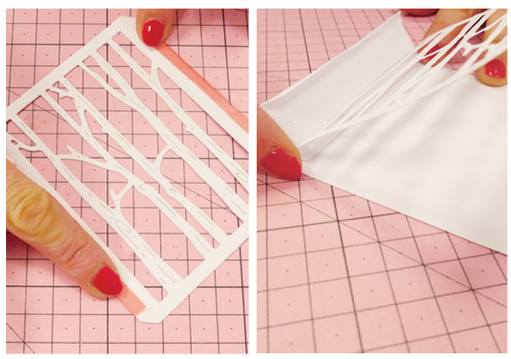
- Woodland Scene Die Set (CODE MSTONE077)
- Shadow Box Frame Die Set (CODE MSTONE076)
- Your choice of Adorable Scorable cardstock
- Hi-Tack tape
- Low-Tack tape
- Scissors or a craft knife
- Die-Cutting Machine



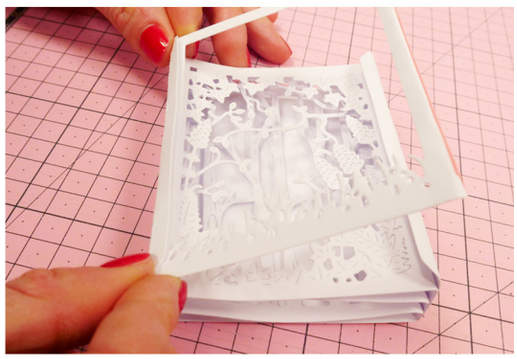
**1.** Die-cut 1 'Base' piece and 1 'Panel' piece with the largest rectangular aperture. You also need 4 panel pieces, with a different Woodland Scene in each (see pic). Line the woodland dies up with the centre of the panel die.



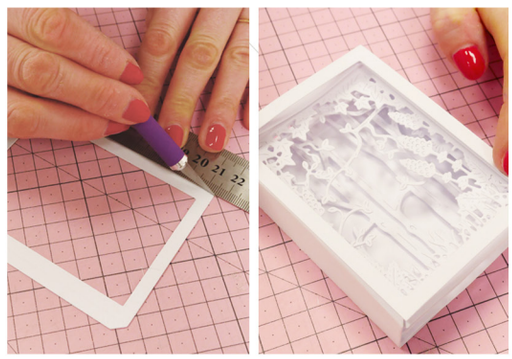
**2.** Fold all the score lines of the base piece up towards yourself to form the main shadow box.



**3.** Fold the score lines on the panel piece with the trees and apply the Hi-Tack tape to the tabs. Align the edge of the tab with the score line on the base piece and stick the tab to the side of the shadow box. Repeat on the other side.



**4.** Repeat Step 3 again with the next 3 panels, lining the edge of the tabs up with the previous panel. The panels should stack up evenly in the shadow box.



**5.** Use your craft knife to cut the tabs off the panel with the rectangular aperture; this will be your front. Apply Hi-Tack tape to the front tabs on the base piece and apply the panel to the front of the Shadow Box.
